

Jeremy Tsai

FULL STACK SOFTWARE ENGINEER

jeremytsai0210@gmail.com > 408-882-7898 > [LinkedIn](#) > [Github](#) > [Portfolio](#) > Los Angeles, CA

As a software engineer, I combine my technical skills with a genuine passion for creating solutions that help people, focusing on writing clean, maintainable code that makes a difference. My experiences in development have shown me the importance of effective collaboration and clear communication across teams, whether contributing to code reviews, participating in sprint planning, or working to understand client needs. I demonstrate strong problem-solving abilities and an eagerness to learn from more experienced team members. I approach each challenge with curiosity and dedication, always seeking to understand not just how to build something, but why it matters to end users. I'm eager to join a forward-thinking team where I can continue developing my skills while contributing to meaningful projects that make a positive impact.

Experienced in a wide range of skills including:

LANGUAGES: HTML, CSS, JavaScript, Python, C/C++

DATABASES: MySQL, PostgreSQL, SQLite

FRAMEWORKS & LIBRARIES: React, Redux, Vite, Flask, Flask-WTF, Express, SQLAlchemy, Alembic, Mocha, Chai

TOOLS: Git, GitHub, Postman, Figma, VS Code

OTHER: Render (Deployment & Hosting), RESTful APIs, Agile, Scrum, Slack, Zoom, Communication, Collaboration, Adaptability, Problem-Solving

PROJECT EXPERIENCE

Stacked >> Flask, Flask-WTF, Alembic, React, Redux, Vite, HTML, CSS, JavaScript, Python, PSQ, SQLite, Postman [GitHub](#) > [Live](#)

- Utilized **Flask-WTF** for form validations during back-end development by providing built-in error messaging through Flask-WTF forms and templates.
- Utilized **SQLAlchemy** to write **SQL** queries in **Python** for handling transactions and database connections efficiently, and **Alembic** for migrating and upgrading the database to create and update the schema.
- Used **React** to develop dynamic modals to manage various functionalities enhancing user interactivity and usability.
- Created and tested custom collection of routes on **Postman** during back-end development by simulating client requests to ensure functionality and resulting responses of **API** calls.

EaterVerse >> Flask, Flask-WTF, SQLAlchemy, Alembic, React, Redux, HTML, CSS, JavaScript, Python

[GitHub](#) > [Live](#)

- Built store and reducer for review data with **Redux** in order to properly update the session state.
- Designed **RESTful** endpoints for user reviews, ensuring smooth backend communication with the frontend.

BluTrek >> Express.js, Node.js, React, Redux, Vite, HTML, CSS, JavaScript, Python, PSQ, SQLite

[GitHub](#) > [Live](#)

- Utilized **Express.js** as a web framework to simplify back-end development in creating **REST APIs**, routing, and security middleware

WORK EXPERIENCE

Part-Time Software Developer >> *The Full-Time Training in Anaheim* > Anaheim, CA

August 2021 - July 2022

- Served as part-time developer on a web application built using Django, Bootstrap, and React aimed for monitoring students' attendance and progress in their theological studies and services.
- Improved faculty work efficiency by visually emphasizing student service hour data to speed up correction and accommodation procedure data processing by 80%.
- Implemented filtering functionality on the maintenance request table for administrators to quickly search for tickets involving similar needs and/or similar housing locations.
- Documented setup procedures and legacy code for future team members improving onboarding efficiency by 300% reducing the time required from 3 work sessions to 1 work session.

EDUCATION

APP ACADEMY >> Full Stack Web Development

Completed January 2025

Full-Time Training in Anaheim (FTTA)

Completed July 2022

University of California in Riverside >> *Bachelor of Science in Computer Science* >> Riverside, CA

Completed June 2020
